

LAB SHEET 1

1. Create a basic HTML5 webpage that includes the `<!DOCTYPE html>`, `<html>`, `<head>`, `<title>`, and `<body>` tags along with a heading and a paragraph describing your favorite hobby.
2. Write an HTML document demonstrating the use of text formatting tags: bold (`<b>/<strong>`), italic (`<i>/<em>`), underline (`<u>`), and strikethrough (`<del>`).
3. Design a webpage that showcases all six levels of heading tags (`<h1>` to `<h6>`) alongside paragraph tags to show text hierarchy and spacing.
4. Create a webpage using the `<blockquote>`, `<q>`, and `<cite>` tags to display a famous quote and its author.
5. Build a simple recipe page that utilizes `<hr/>` to separate different sections and `<br/>` for line breaks within an address format.
6. Create a webpage containing an unordered list (`<ul>`) of your top five favorite movies.
7. Design a step-by-step instruction guide using an ordered list (`<ol>`) with numerical markers.
8. Create a glossary page for computer science terms using a description list (`<dl>`), description terms (`<dt>`), and description definitions (`<dd>`).
9. Build a multi-level nested list representing a university's course structure.
10. Create an HTML file containing an ordered list that uses Roman numerals (`type="I"`) and lowercase letters (`type="a"`).
11. Write an HTML snippet to insert an image into a webpage using the `<img>` tag with proper `src` and `alt` attributes.
12. Create a webpage featuring an image where you explicitly define the width and height attributes.
13. Design a webpage containing an image that, when clicked, redirects the user to an external website using an anchor tag (`<a>`).
14. Implement an image layout using the `<figure>` and `<figcaption>` tags to display a photograph with a descriptive caption.
15. Write code demonstrating how to source images both from a local directory folder and from an external URL source.
16. Create an HTML table (`<table>`) with 3 rows and 3 columns containing student information using `<tr>`, `<th>`, and `<td>` tags.
17. Design a product price list table that includes a proper table `<caption>` and clear table headers (`<th>`).
18. Create a timetable grid where at least one cell spans across multiple columns using the `colspan` attribute.
19. Build a complex data table that uses the `rowspan` attribute to merge cells vertically across multiple rows.
20. Construct a financial report table that correctly structures its content using `<thead>`, `<tbody>`, and `<tfoot>` semantic tags.
21. Design a comprehensive user registration form using the `<form>` tag containing text fields for First Name, Last Name, and Email, along with a submit button.
22. Add gender selection using radio buttons and hobby selections using checkboxes to a user profile form.

23. Create a selection dropdown menu using `<select>` and `<option>` tags allowing users to choose their city of residence.
24. Build a feedback form that includes a multi-line text input area (`<textarea>`) for comments and a file upload input type (`<input type="file">`).
25. Design a structured survey form that groups related fields using `<fieldset>` and `<legend>` tags.
